

# Understanding the changes in the 2015 NFPA 70E

## COURSE OVERVIEW

3HR Course

NFPA 70E provides guidance for employers to help workers avoid injury from a release of electrical energy, and prevent or minimize exposure to all widely recognized electrical hazards. This course covers the changes to the 2015 edition, and is intended to aid in updating your electrical safety program, associated documents and work practices

### This course is for:

- Owners, contractors, employers, safety directors and trainers, managers, Personal Protective Equipment (PPE) buyers, electrically qualified workers and unqualified employees.

*This class is a must for anyone who is trying to keep up with current electrical safety requirements!*

### (Learning Objectives):

At the conclusion, you should be able to:

- Discuss the changes made in the 2015 NFPA 70E edition
- List the different variations and changes to PPE requirements
- Discuss the changes to the NFPA arc flash tables and describe how it is intended to be used
- Describe changes to warning label requirements
- Describe the differences between an arc flash hazard analysis and an electrical risk assessment.
- Discuss how these changes will affect current policy and electrical safety processes.

Recommended previous training/knowledge of the previous NFPA 70E articles/principles  
(Not required for attendance)

State CEU and PDH credits available upon request
